political, economic, social and cultural rights,
including the right to development**

Written statement* submitted by the Eastern Sudan Women Development Organization, a non-governmental organization in special consultative status

The Secretary-General has received the following written statement which is circulated in accordance with Economic and Social Council resolution 1996/31.

[30 August 2015]

* This written statement is issued, unedited, in the language(s) received from the submitting non-governmental organization(s).

The impact of the unilateral coercive measures on the human health in Sudan

USA have imposed unilateral sanctions on Sudan since 1997. The negative economic impacts of these sanctions on Sudanese citizens are considered clear human rights violations with direct negative impact on Sudanese's civil community. The most affected sector of the community were women, children, elders, disabled, poor and patient.

The unilateral sanctions exacerbated the acuteness of some all the diseases for instance malnutrition particularly among children and women.

The depletion of clean drinking water had contributed in the spread of diseases and mortality rate. There is a lack of medical equipments, life medicine; for instance there is hundred thousand Sudanese who suffered from kidney failure and cancer. The number of the hospitals that can treat these patients suffered from kidney failure, cancer, chemically or by radiation rays are not sufficient.

The direct impact of the sanctions on the public health sector increases the spread of the diseases and exacerbated the mortality rate as normal consequence of the following factors:

- 1- The non availability of the microscope equipments, micro diagnosing tools for epidemic diseases it resulted in unnecessary delay for the confirmation of laboratory results for epidemic diseases.
- 2- The difficulty of importing of some USA made medical equipments and tools negatively impacted the safety of food processing.
- 3- The steadily increasing in the prices of the imported medical equipments related to the medicine of the epidemic diseases and the pre-care.
- 4- The non availability of the vaccine for epidemic diseases like hemorrhagic fever. Also the current diseases like malaria, TB, HIV, Dengue, diarrheal illnesses, pneumonia which are considered medical priorities. These diseases are considered the most common cause of mortality among at risk groups such as women, children, elderly and those who suffer from poverty.

The survey studies indicated that:

- 1- 75% out the population (24 million) are vulnerable to malaria disease and 25% spread the disease.
- 2- The yearly morbidity rate is 7.430 per 100.000 in the population. the mortality rate is 3.6 per 100.000 in the population.
- 3- To identify HIV it necessitates sample collection and kind of diagnosing needs. USA made equipments this cause led to a delay in diagnosing HIV disease.
- 4- The economic sanctions impacted the information technology negatively in the context of scientific information, qualifying the working cadre in the medical field in the country and the successive excuse of the specialist institutions to conduct training courses capacity building in Sudan in line with the USA sanctions.

We a civil society operating in human rights field, humanitarian assistance for the needy people, accordingly we call for international community to speed up uplifting of these sanctions so as to facilitate the delivery of these services. These sanctions are inhumane, all in violation of all the international conventions that are appealing for peace, human dignity, freedom.

We call for the special Rapporteur on negative impact of the unilateral coercive measures to make some arrangements towards the Sudan sanctions' file.

Thank you
