Districts (white)

Community engagement

One of the central aims of CCCM is to enable affected populations to play an active role in the decision-making processes that affect them. CCCM activities will ensure populations have the space to voice their opinions, participate in service delivery and get direct feedback from service providers.

- CCCM partners meet regularly with community representatives in sites to gain feedback on services and insights on the well being of the site residents.
- Awareness raising activities are organized daily across displacement sites key messages pertaining to service accessibility and operations in sites.
- The CCCM partner in Metuge published a report on community engagement and access to information for displaced people. The main findings across the total 6 sites assessed were: the majority of women do not have access to phones, not all women speak Portuguese, and women trust aid workers above other in-person information source. The reports can be found clicking [HERE](#).
- CCCM partners launched a CFM mechanism across sites (12) in Metuge and Chiure. This has proven very successful, with 44% of complaints coming from women. 187 complaints were collected in April, with the majority of these for the FSL and Shelter NFI clusters.

Site development

CCCM partners provide site planning, development, and upgrades to sites to ensure they are safe and meet the needs of site residents.

- The 4 community alpendres built in March in Mapupulo (one per each area of the sites: Piloto, Ntele, Expansao, Namputo) are under improvement to ensure better resilience of the structure. The alpendre should work as a gathering point for the committees and a safe space where to discuss issues pertaining the life of the site and common challenges.
- A CCCM partner began the development of 4 sites in Montepuez following a request from the local authority and a multi-sectoral site assessment. The sites are currently under demarcation. Initial estimates suggest that the total plots planned in Montepuez will be 5480 (space for 27,400 individuals).
- CCCM site planners identified, planned and cleared an area close to the Nangua site intended for relocation of IDPs who are currently living in schools. It will remain a temporary site as the land tenure is not agreed for long term occupation.
- Site clearance continued in Ancuabe and Metuge for the ongoing site development processes.
- Solar streetlights were installed at Nanjua B (Marokani).

Coordination and Information management

CCCM partners provide site level coordination and information so that service providers responding in sites and settlements can ensure sustained emergency responses for affected populations that meet minimum standards without duplication of activities.

- The CCCM cluster keeps an updated Master Site list with names and locations of known IDP sites across the region.
- A Service mapping of partners at site level is available for 9 sites. The service mapping shows which partners are providing services in which sites.
- Coordination meetings with service providers working in displacement sites is held every Tuesday
- Site monitoring is being conducted by CCCM teams across sites in Cabo Delgado (Metuge, Montepuez, Chiure, Ancuabe,) as well as particular sites in Nampula province.
- CCCM supported the setup of the Centro Desportivo in response to IDPs arriving in Pemba following the attacks in Palma. The transit centre is for IDPs coming from Palma who do not have family or a support system nearby. The transit center is regularly occupied with between 250-400 people. Services such as health, wash, NFI, food, education and protection are offered at the centre.

Disability Inclusion

CCCM is working closely with the disability working group to ensure operations include a lens of inclusivity. This includes developing guidelines to engage with persons with disabilities through community governance structures as well as monitoring activities against the Camp Management Standards Disability Inclusion Checklist. A report on findings will be circulated in coming weeks.
