1. Methodology

The study used the Computer-Assisted Telephone Interviewing (CATI) method, and quotas sampling based on most recent official population data available in each of the targeted cities, to achieve the desired sample size. The target population is residents aged between 16 years and 35 years who live in Tripoli, Benghazi and Misrata.

One to One for Research and Polling, interviewed a sample of 390 persons from the target population. 130 in each governorate.

The data collection started on the 2nd of August, 2022 and ended on the 6th of September, 2022.

About data collection

As described above, the data collection was done based on the CATI method. The preparation for the data collection took 4 days. Before starting the data collection, the sampling expert has prepared the quotas for each city. The quotas were established based on the most recent official available data from the National Office of Statistics realized in 2012. Quotas were fixed by area, age, gender and governorates (bsc.ly).

Hereafter, the quotas achieved: the official data used to establish the quotas:

<table>
<thead>

</table>
We don’t need to weight the data because the achieved quota perfectly matches target quotas.

**Details about the list of phone numbers and coverage**

One to One has created a frame composed of all possible exiting numbers with the different existing prefixes (all possible combinations for the remaining numbers) then the system selects randomly numbers and injects each time (until reaching the targeted sample) a set of 10,000. The random generation of numbers is done for each new survey. Therefore, we don’t particularly know when calling if the number works or not, or even exists or not. Each created number is unique and all the lists come from a unique frame where there are no duplicates.

The list created is composed of 100% of mobile phones. One to One has covered all the telephone operators in Libya (Libyana, LibyaPhone and Almadar).

**Interview length**

The interviews’ average length is **8 min 9 seconds**.

**Details about data cleaning**

In carrying out data preprocessing, we went through three main sections:

Translation of the database, coding of open-ended questions and data cleaning.

In data cleaning phase we have checked if the number of complete questionnaires does match the target one by checking of missing questionnaires and removing duplicate ones. Compare the obtained quotas to the established one to detect differences (this is done in a regular basis in tracking the quality of the data and also at the end of data collection).

We also check the quality of open-ended responses; correct understanding of questions and coherent answers.
2. Executive summary

In this study, 390 respondents were interviewed about their socio-economic situation. The sample is equally divided over the three governorates; one third in each of Tripoli, Benghazi and Misrata.

DEMOGRAPHICS:

In general, the respondents were divided equally into men and women whose ages are between 16 and 35 years old with a dominance of the age group 20-29 (51.8%). More than half of the sample are single (56.2%) while 41% are with average number of kids of 2.

85.7% of those who have school aged children are having children already in schools.

Concerning the level of education, while most of the sample reached high school, only 28.7% graduated from university. 27.2% of the respondents are continuously working, this proportion differs somewhat depending on gender: it reaches 38% for men while 14% for women. The majority of those who declared their households revenue, (180 respondent), earn between 5000 and 10000 dinars a month (48.9%).

SECURITY AND SAFETY:

Let’s start with the security and safety topic. The majority of respondents (85.4%) feel either very safe or rather safe in their neighborhood. Nevertheless, 13.9% of Libyans feel rather not safe or not safe at all. When comparing regions, Tripoli seems to be the safest city as 42.8% of respondents feel very safe comparing to 33.8% in each of Benghazi and Misrata.

ECONOMY: BASIC NEEDS

The second important topic is the basic needs and ability to get enough goods for the household. 33.8% of the respondents declared they manage to provide sufficient food in their household, despite the current food prices, 46.7% can just about manage to get enough food and 17.2% can hardly or cannot at all provide enough food in their household.
Similarly, 31.3% of respondents manage to buy basic consumer goods such as clothing or shoes, 45.9% manage just about to provide those goods to their household, while more than 2 out of 10 (20.2%) of respondents can hardly or cannot do.

HOUSING:

Talking about housing now, respondents often live with their core family (68.2%), or extended family (27.2%) and only 3.9% of the sample live alone; or with housing partners. Although the difference is very small, men are more likely than women to live alone or with partners, while women tend more than men to live with extended or core family.

Concerning access to drinking water; the majority confirmed they always have access to clean drinking water (64.9%). While more than one third (31.5%) of the sample has access only sometimes and 1.8% have very limited access or do never have access to clean drinking water. When comparing results between governorates, in Tripoli, clean water access is the most accessible (76.9% do always have access) comparing to 63.1% in Misrata and 54.6% in Benghazi.

In a similar topic, more than half of the sample affirmed they always have electricity available in their dwelling (59.5%). More than one quarter (25.9%) say they mostly have electricity available while for the remaining 11.3%, electricity is sometimes or never available. Benghazi has a lower availability of electricity (55.4% say that electricity is always available) comparing to Tripoli and Misrata (61.5% in both).

For cost of housing, most respondents live in owned houses (86.7%). Out of the 13.3% who are renting their houses, 47.5% pay between 500 and 999 dinars as a monthly renting house.

HEALTH AND MEDICAL SERVICES:

Getting to the last part of the survey, most respondents (74.4%) have access to all necessary hygiene products and 23.1% just about have access to these products while 2.3% hardly or any access. Male seem to have better access to these products. In fact, 78.4% of men have all necessary hygiene product while 69.5% of women do.
Concerning the access to different medical services, the majority 60.2% of the sample have access to vaccination against polio, flu, etc. (45.1% have always access and 15.1% have only sometimes access). 3 out of 10 respondents cannot afford or do not have access to vaccinations (32.5%).

67.7% of the sample have access to vaccination against SARS-Covid19 (52.3% have always access and can afford and 15.4% have limited access). Accessibility differences are significant between cities, 66.9% of respondents have always access to vaccination in Misrata followed by Benghazi (51.5%) then Tripoli (38.5%).

For the general practitioner, 64.4% of the sample have access to this service (39.5% always have access and 24.9% have limited access). The percentages vary between Misrata (45.4%) always have access while 40.8% in Benghazi and 32.3% in Tripoli.

Only 33.1% of respondents declared they always have access and can afford to visit a dentist and 24.9% said they have a limited access, whereas 37.7% either cannot afford or do not have access this service.

Following the same trend, medical specialists are also accessible always for one third of the sample (30.5%). Tripoli has the worst access as only 18.5% of respondents have always access and can afford to go to a specialist comparing to Benghazi (35.4%) and Misrata (37.7%).

For hospital for treatment and surgery services 51.1% of respondents have access and can afford; either always (32.6%) or limited access (18.5%). Generally, these services are more accessible to women (36.2% always have access and can afford) than men (29.6). Just like other health/medical related services, respondents in Misrata have better access (46.9% have always access and can afford) than Benghazi (36.9%) and Tripoli (13.8%)
